SOLUTION PROFILE

CP GATEWAY

for the retail industry

CPGateway from Radiant Systems enhances electronic payment processing for merchants using the CounterPoint retail management solution. With CPGateway, you can authorize credit cards, debit cards, EBT food stamps, stored value cards and checks via the Internet in just seconds. It's fast, reliable, secure and easy to set up. Most importantly, CPGateway allows you to offer your customers a variety of payment options – all processed at lighting speed – and a more convenient, satisfying shopping experience.

IMPROVE SERVICE SPEED
Process card-based payments, checks and food stamps in mere seconds and get more customers through the line.

REDUCE PAYMENT-RELATED COSTS
Use just one Internet connection for multiple point-of-sale workstations, saving money on Internet service costs. Decrease bank fees with direct American Express card authorizations.

STREAMLINE CARD SETTLEMENT
Settle card transactions at any time – even during business hours – without degrading card authorization speed at check out. Ensure reliable overnight settlements.

INCREASE PAYMENT SYSTEM RELIABILITY
Continue processing card transactions even if your Internet connection fails. CPGateway automatically switches to dial-up communication mode in the event your high-speed Internet service is interrupted.

CPGateway – The Ideal Payment Solution for Any CounterPoint Retailer

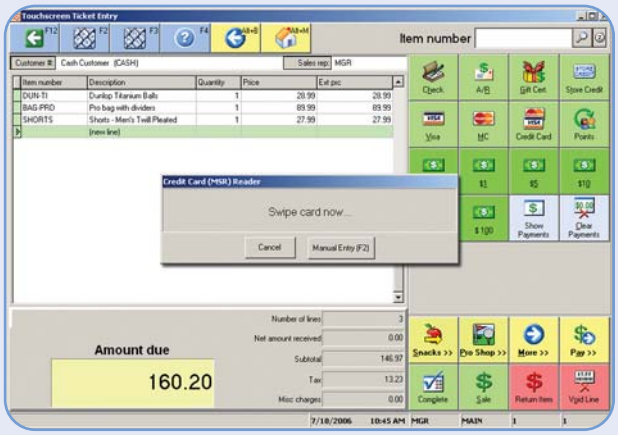
CPGateway is suitable for businesses of all size. High-volume businesses will benefit from lightning-fast authorizations all year long. Lower-volume businesses can reduce monthly fees by using CPGateway only during their peak seasons.

HOW DOES CPGATEWAY WORK?

To authorize a charge, obtain the credit card information by using a magstripe card reader or by entering the card information manually.

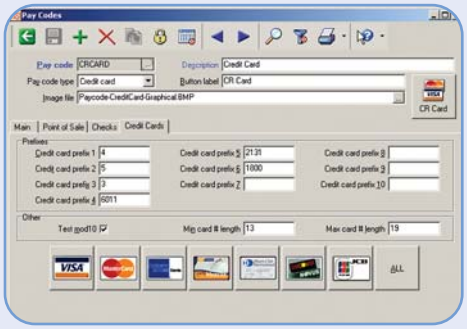
The CounterPoint system requests an authorization from CPGateway. CPGateway obtains the authorization from your processor and quickly passes it back to CounterPoint. Because CounterPoint connects to CPGateway via the Internet, and CPGateway maintains a constant high-speed connection to your processor, you avoid the delays associated with dial-up connections.

CounterPoint and CPGateway are designed to ensure that you will continue authorizing credit cards—no matter what. If your high-speed Internet service fails, CounterPoint automatically switches to dial-up mode. All authorizations, whether from CPGateway or dial-up, are identical and can be settled in the same batch.



KEY CPGATEWAY FEATURES

- Two-second authorizations for credit cards, debit cards, EBT food stamps, stored value cards and checks via the Internet.
- Simple set up, fast settlement times and tight security.
- Compatibility with CounterPoint V7, CounterPoint SQL and CPOnline for real-time card authorizations.
- CISP-compliance (Visa's Cardholder Information Security Program protects cardholders from identity theft).
- One Internet connection supports multiple workstations with equally fast processing.
- Compatibility with CounterPoint's preferred processors.
- Automatic fallback to dial-up connection if high-speed connection fails.
- Direct American Express authorizations instead of routing through processors (reduces bank fees).



GETTING STARTED

Setting up CPGateway is quick and easy. Simply sign up anytime at www.cpgateway.com and follow the instructions on screen. You may begin using CPGateway immediately. There's no obligation. You can cancel any time.
