Protect Your Systems from Cyber Criminals – Avoid Potential Processor Fines

We have been asked by Radiant Systems to help you assess the risk of *Cybercrime* in your CPSQL or CPV7 Computer Systems and Software. Please see the attached letter from Ernie Floyd, Director of Data Security and Compliance, Radiant Systems.

We agree with Radiant that this is a very real threat for any Retail Organization. If your organization’s security is breached you risk *finest of \$ 5,000 to \$ 50,000 per incident* from your Credit Card Processors, and the loss of card privileges. This could result in the loss of your business - in the worst case.

You may have seen the unfortunate situations in the eastern USA with cyber intrusion in recent months. These Retailers were assed fines in excess of \$ 50,000 by their processors.

What we are proposing is a *7 point program*, suggested by Radiant, as a thorough review of your computer systems servers, stations, and back-office. This will help provide a *Secure Baseline Environment* by eliminating the most common sources of breaches. This is much more than just a virus prevention program.

Combining this with the PCI DSS transaction security Radiant offers, *with current software releases*, will give you a very strong hedge against cybercriminals and the financial harm they may cause you. We have enclosed a table of the associated costs for reviewing your in-house systems.

These costs include the 7 point review tasks and *a report of our findings and recommendations*. Any products and services required to implement our recommendations will be billed separately. You can use your CCS Support Packs for either of these services but not for any products needed.

We *urge you to participate* in this program as soon as possible. To get started email us at sales@ccscentral.com with the Subject: CCS Risk Assessment Program.

CCS Risk Assessment Program Cost Schedule per Item

ITEM EXAMINED	COST (1-10 ITEMS)	COST (10+ ITEMS)
Windows Server	270	250
Linux/UNIX Server	270	250
Windows Desktop	135	115
Radiant Station	135	115
Peripheral Device	To Be Quoted	To Be Quoted

Sincerely,

Marilyn McCormick
